

## Allergy and Immunology Case 2 and Allergy Elective Curriculum

The Allergy and Immunology Curriculum is designed to provide residents in internal medicine with the fundamental knowledge and skills to recognize, manage, and refer common problems and diseases involving allergy and clinical immunology.

**GOALS**  
**SPECIFIC LEARNING OBJECTIVES**  
**METHODS AND FORMAT**  
**REFERENCES-READING**  
**EVALUATION**  
**BASIC ALLERGY AND IMMUNOLOGY SYLLABUS**

### **GOALS**

The general learning goals for internal medicine residents in Allergy and Immunology are shown below. Residents should:

#### **PATIENT CARE:**

- Become proficient in obtaining a focused history and performing an accurate examination in Allergy and Immunology.
- Recognize "can't miss" diagnoses and conditions requiring emergency management in Allergy and Immunology.

#### **MEDICAL KNOWLEDGE AND SKILL DEVELOPMENT:**

- Acquire knowledge and skills necessary to recognize and manage common diseases in Allergy and Immunology which may present to primary care physicians.
- Learn to do simple office procedures in Allergy and Immunology which are appropriate for primary care practice.

#### **SYSTEMS-BASED PRACTICE:**

- Understand when and how to refer patients with a problem in Allergy and Immunology.
- Become familiar with support services and community and education resources for patients with Allergy and Immunology problems.

#### **PATIENT-BASED LEARNING AND IMPROVEMENT:**

- Learn to access and use educational resources, databases and guidelines for Allergy and Immunology problems

It is also expected that internal medicine residents will continue their development and assessment of INTERPERSONAL AND COMMUNICATION SKILLS and PROFESSIONALISM during BASIC rotations.

#### **•SPECIFIC LEARNING OBJECTIVES**

- To become familiar with the work-up of a patient with IgE-type hypersensitivity and other related disorders

- To obtain more in depth understanding of the pathophysiology of these disorders
- To understand the management of allergic rhinitis and indications for immunotherapy
- To understand the management of mild asthma according to NHLBI guidelines
- To understand the management of food allergies in adults, primarily of the most common one, peanut allergy
- To understand the management of chronic urticaria and angioedema
- To understand the management of anaphylaxis

## METHODS AND FORMAT

***Faculty\_Coordinator; Dr. Sarbjit Saini  
(office 550-2129, Room 28.71; cell 410-978-3706)***

### Clinical Teaching Sessions with Allergy and Immunology Faculty:

It is expected that residents will participate in the evaluation of both new and return patients as scheduling permits. It is also expected that, if residents are not evaluating a patient at any given time, they participate in the presentation and discussion of other patients by the fellow or the attending.

In general, residents are expected to see between one and two new patients and one and two return patients at each session. The syllabus package contains instructions regarding the most important aspects of medical history taking in the allergy clinic.

These aspects will be reviewed by one of the attendings on the first week of the rotation. In addition, we have included skin test forms, as well as instructions regarding allergen immunotherapy; these items will also be reviewed and discussed at the beginning of your rotation.

Our current clinic slots are as follows:

	Monday	Tuesday	Wednesday	Thursday	Friday
AM	Saini/Salicru/ Akinyemi	Akinyemi/ Salicru/	Salicru/Jani/ Shier	Adkinson/ Salicru/ Silber	Rotating Clinic / Limb/Paterniti
PM	Akinyemi/ Tversky/ Salicru	Salicru/ Akinyemi/ Tversky	Conferences 1:00- 2pm (Sept-May); Summer Orientation Series (June-Aug)	Adkinson/ Salicru	Conference-1 :00- 2:00 pm (Sept- May); Summer Orientation Series (June-Aug)

AM clinics are from 7:30 am - 12 noon

PM clinics are from 1:00 pm - 5:00 pm

## SYLLABUS AND CONFERENCES

The Table of Contents is attached to this description, which also includes medical literature addressing the above illnesses, which are most commonly encountered in the allergy clinic. It is important to read through these manuscripts and chapters and discuss any questions

with the attendings. They will both give you the opportunity to do so during patient presentations, in the course of the clinics. A few cases and questions that are used in Internal Medicine board review courses are also included.

In addition to the clinic, you are invited to attend our divisional conferences for which the schedule for the month your rotation is taking place is posted in clinic. We highly recommend the Friday 1:00 P.M. -2:00 P.M. conference, which centers around clinical topics. In addition, Wednesday at 1:00 PM to 2:00 our fellows and faculty present a research conference followed by a clinical teaching conference.

## EVALUATION

Each resident receives feedback in the context of their daily work with the clinic attending and is more formally evaluated by the AI CASEII director using the on-line "E\*value evaluation system". The residents also have the opportunity to evaluate the rotation using the on-line "E\*value evaluation system".
